LTX Electric Tractor and Transporter Intelligent pulling

This specification sheet, which conforms to VDI guideline 2198, provides the technical values for the standard equipment only. Different tyres, other masts, the use of accessories, etc. may result in other values.

LTX 70 Top view

Performance diagram

Where the pull load is indicated by a solid line. It is possible to re start the equipment on an incline after stopping.

The permitted travel distance per hour is the total distance including the return journey and descents. It is recommended to use trailers with brakes if the trailer weight is more than 2.5 t and for all trailer loads if there is travel on inclines/gradients.

Lateral battery change

Pedestrian function

Step

LED daytime driving lights

STILL Ramp Indicator

Large footwell

Adjustable steering column

Low access step and spacious footwell

LED daytime driving lights – low energy consumption, high safety level, long durability

Pedestrian operation provides efficient production supply

Three letters stand for the next stage of evolution in electric tractors and transport vehicles: LTX. This forward-looking forklift truck pulls up to eight tonnes quickly and reliably to wherever you want – whether indoors or outdoors. The automatic parking brake ensures safe starting on ramps and easy dismounting: It is activated as soon as the vehicle is stationary. The STILL Ramp Indicator also informs the driver at all times of the current incline or gradient. Achieving optimal forklift truck utilisation has never been easier. Even frequent entry and exit over short distances is a thing of the past with the LTX, as with pedestrian operation the vehicle follows the operator at every turn.

It is not just the low access step that makes it comfortable to take your seat in the truck: The driver's seat that is also used in the forklift sector impresses with its excellent springing and cushioning, while the spacious footwell also provides sufficient space for the largest work shoes. The durable and environmentally friendly LED daytime driving lights ensure the vehicle is visible at all times – a significant plus for safety at work. The multifunctional use, whether in the production supply, as tugger train, in the facility management or in the transport of luggage at airports: The future of more efficient horizontal transports has begun.

Extensive Equipment

Power

- High handling rate: pulls and transports loads of up to 8 tonnes
- Fast transport of goods thanks to top speed of up to 20 km/h and high gradeability
- Optimal forklift truck utilisation: gradient display informs you at a glance of the current incline and gradient situation

Precision

- Couple trailer quickly and safely with clear view of the trailer coupling
- Precision at the touch of a button: reversing device enables you to drive the tractor safely and precisely up to the trailer
- Sensitive acceleration and steering guarantee that goods are transported safely and smoothly

Ergonomics

- Pedestrian operation: simply touching a button saves frequent exits and entries on short stretches
- Comfortable seats: STILL has designed modern sprung and cushioned driver's seats for its forklift trucks to provide high levels of comfort
- Easy access thanks to low step
- Simple, fast, stress-free: lateral battery change gives renewed energy in just a few moments

- Always hands-free: generous storage facilities in the truck, e.g. for documents, drinking bottles and mobile devices
- Easily accessible load bed height of 680 mm (transporter) and 645 mm (tractor)

Compactness

Compact design and extreme manoeuvrability for optimum working performance, combined with sensitive drive control

Safety

- Optimum safety through combination of three braking systems: electric brake, hydraulic brake and automatic parking brake
- Be seen: LED daytime driving lights make the vehicle clearly visible to other drivers
- No unintended rolling away: the automatic parking brake is activated as soon as the truck is stationary

Environmental Responsibility

- Long-lasting and energy-saving LED lamps
- Low wear and long service intervals of 1,000 operating hours
- High durability of the tractor battery through easy maintenance: Battery's acid level is monitored and shown in the display
- Blue-Q efficiency mode saves up to 10 per cent energy at the press of a button with no loss of performance
- Over 95 percent of all installed materials are recyclable
